- 1/ Salary includes the employees' annual base federally taxable earnings, pretax contributions to the Company's Deferred Savings and Employee Stock Ownership (401(K)) Plan, pretax Section 125 flexible spending account contributions, pretax medical premium contributions, and, in some cases, tax deferred Executive Benefit Restoration Plan contributions.
- 2/ Bonuses consist of the following:
 - A> NSG Bonus award.
 - B> North Star award.
 - G> Change in control payment paid to officers leaving the company.
 - K> NOR Pref Plan Bonus.
- 3/ All Other Compensation for named employees consists of the following:
 - C> Phantom stock taxable
 - D> Imputed income.
 - E> Car Allowance fringe benefit.
 - F> Imputed Income Moving Expense.
 - H> Company paid physicals.

^{48 &}lt;u>Z/ Innere were changes in the Zuuz balance sneet related to our corporate reorganization and subsequent</u>
49 divestiture and acquisition resetting equity under new ownership by NorthWestern Corporation. Additionally,
50 there were significant changes in regulatory asset and liability and other accounts for compliance with terms
51 in the stipulation agreement/TierlI settlement. The cash flow presentation in Sch. 23 for 2002 is net of these
52 non-cash changes.

53

NOTES TO THE FINANCIAL STATEMENTS

1. Nature of Operations and Recent Developments

NorthWestern Corporation (the "Company" or "we") is one of the largest providers of electricity and natural gas in the Upper Midwest and Northwest, serving more than 598,000 customers in Montana, South Dakota and Nebraska. We have generated and distributed electricity in South Dakota and distributed natural gas in South Dakota and Nebraska since 1923 through our energy division, NorthWestern Energy, formerly NorthWestern Public Service. On February 15, 2002, we completed the acquisition of the electric and natural gas transmission and distribution business of The Montana Power Company, or Montana Power. As a result of the acquisition, from February 15, 2002 through November 15, 2002, we distributed electricity and natural gas in Montana through our wholly owned subsidiary, NorthWestern Energy LLC. Effective November 15, 2002, we transferred the energy and natural gas transmission and distribution operations of NorthWestern Energy LLC to NorthWestern Corporation and since that date, we have operated its business as part of our NorthWestern Energy division. We are operating our utility business under the common name "NorthWestern Energy" in all our service territories. The former NorthWestern Energy LLC has been renamed "Clark Fork and Blackfoot, L.L.C."

2. Significant Accounting Policies

Use of Estimates

The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America required the Company to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Estimates are used for such items as long-lived asset values and impairment charges, long-lived asset useful lives, tax provisions, uncollectible accounts, billing adjustments, environmental costs, unbilled revenues and actuarially determined benefit costs. We revise the recorded estimates when we get better information or when we can determine actual amounts. Those revisions can affect operating results. Each year we also review the depreciable lives of certain plant assets and revise them if appropriate.

Revenue Recognition

For our Montana operations, as prescribed by the MPSC, operating revenues are recorded monthly on the basis of consumption or services rendered. Customers are billed monthly on a cycle basis.

Cash Equivalents

We consider all highly liquid investments with maturities of three months or less at the time of purchase to be cash equivalents.

Restricted Cash

Restricted cash consists primarily of funds held in trust accounts to satisfy the requirements of certain stipulation agreements and insurance reserve requirements.

Inventories

Natural gas inventories for the regulated energy business are stated at the lower of cost or market, using the first-in, first-out ("FIFO") method. Materials and supplies for the regulated energy business are stated at the lower of cost or market, with cost determined using the average cost method. Inventory at December 31 is as follows (in thousands):

	2002	2001
Utility	\$7,929	\$9,112

Regulatory Assets and Liabilities

Our regulated operations are subject to the provisions of Statement of Financial Accounting Standards No. 71, Accounting for the Effects of Certain Types of Regulations (SFAS No. 71). Regulatory assets represent probable future revenue associated with certain costs, which will be recovered from customers through the ratemaking process. Regulatory liabilities represent probable future reductions in revenues associated with amounts that are to be credited to customers through the ratemaking process.

If all or a separable portion of our operations becomes no longer subject to the provisions of SFAS No. 71, an evaluation of future

recovery of the related regulatory assets and liabilities would be necessary. In addition, we would determine any impairment to the carrying costs of deregulated plant and inventory assets.

Investments

Investments consist primarily of life insurance contracts. In addition, we have investments in various money market accounts and other items. Life insurance contracts are carried at their cash surrender value. Investments in life insurance contracts of \$22.2 million are held in trust and restricted for postretirement benefits.

Investments consisted of the following at December 31 (in thousands):

December 31, 2002	
Life insurance contracts & other investments	\$22,974
	\$22,974
December 31, 2001	
Life insurance contracts & other investments	\$21,448
	\$21,448

Derivative Financial Instruments

We manage risk using derivative financial instruments for changes in electric and natural gas supply prices and interest rate fluctuations.

We periodically use commodity futures contracts to reduce the risk of future price fluctuations for electric and natural gas contracts. Increases or decreases in contract values are reported as gains and losses in our Consolidated Statements of Income unless the commodities are specifically subject to supply tracking mechanisms within the regulatory environment.

The fair value of fixed-price commodity contracts were estimated based on market prices of commodities covered by the contracts. The net differential between the prices in each contract and market prices for future periods has been applied to the volumes stipulated in each contract to arrive at an estimated future value. Two contracts at December 31, 2002 existed with estimated future benefits of \$0.2 million.

Property, Plant and Equipment

Property, plant and equipment are stated at cost. Depreciation is computed using the straight-line method based on the estimated useful lives of the various classes of property, ranging from 3 to 40 years.

All expenditures for maintenance and repairs of utility property, plant and equipment are charged to the appropriate maintenance expense accounts. A betterment or replacement of a unit of property is accounted for as an addition and retirement of utility plant. At the time of such a retirement, the accumulated provision for depreciation is charged with the original cost of the property retired and also for the net cost of removal.

Property, plant and equipment at December 31 consisted of the following (in thousands):

	2002	2001
Land and improvements	\$29,344	\$33,223
Building and improvements	62,870	58,073
Storage, distribution, transmission and generation	1,374,965	1,454,205
Construction work in process	13,266	10,321
Other equipment	143,900	46,010
	1,624,345	1,601,832
Less accumulated depreciation	(584,111)	(553,803)
	\$1,040,234	\$1,048,029

We capitalize the cost of plant additions and replacements, including an allowance for funds used during construction (AFUDC) of utility plant. We determine the rate used to compute AFUDC in accordance with a formula established by the Federal Energy Regulatory Commission, or FERC. This rate averaged 8.7%, 6.1% and 8.6% for 2002, 2001 and 2000, respectively.

We record provisions for depreciation at amounts substantially equivalent to calculations made on a straight-line method by applying various rates based on useful lives of properties determined from engineering studies. As a percentage of the depreciable utility plant at the beginning of the year, our provision for depreciation of utility plant was approximately 3.4%, 3.4% and 3.5% for 2002, 2001 and 2000 respectively.

Income Taxes

Deferred income taxes relate primarily to the difference between book and tax methods of depreciating property, amortizing tax deductible goodwill, the difference in the recognition of revenues and expenses for book and tax purposes, certain natural gas costs, which are deferred for book purposes but expensed currently for tax purposes, and net operating loss carryforwards.

Environmental Costs

We record environmental costs when it is probable we are liable for the costs and we can reasonably estimate the liability. We may defer costs as a regulatory asset based on our expectation that we will recover these costs from customers in future rates. Otherwise, we expense the costs. If an environmental expense is related to facilities we currently use, such as pollution-control equipment, we capitalize and depreciate the costs over the life of the plant, assuming the costs are recoverable in future rates or future cash flow.

We record estimated remediation costs, excluding inflationary increases and probable reductions for insurance coverage and rate recovery. The estimates are based on our experience, our assessment of the current situation and the technology currently available for use in the remediation. We regularly adjust the recorded costs as we revise estimates and as remediation proceeds. If we are one of several designated responsible parties, we estimate and record only our share of the cost. We treat any future costs of restoring sites where operation may extend indefinitely as a capitalized cost of plant retirement. The depreciation expense levels we can recover in rates include a provision for these estimated removal costs.

Accounting for Business Combinations

In July 2001, the FASB issued Statements of Financial Accounting Standards No. 141, *Business Combinations*, and No. 142, *Goodwill and Other Intangible Assets* (SFAS No. 142). These standards change the accounting for business combinations by, among other things, prohibiting the prospective use of pooling-of-interests accounting and requiring companies to stop amortizing goodwill and certain intangible assets with an indefinite useful life. Instead, goodwill and intangible assets deemed to have an indefinite useful life will be subject to an annual review for impairment. The new standards generally were effective for us in the first quarter of 2002 and for purchase business combinations consummated after June 30, 2001.

New Accounting Standards

In June 2001, the Financial Accounting Standards Board issued SFAS No. 143, Accounting for Asset Retirement Obligations, which was effective January 1, 2003. The statement provides accounting and disclosure requirements for retirement obligations associated with long-lived assets. The statement requires the present value of future retirement costs for which the Company has a legal obligation be recorded as liabilities with an equivalent amount added to the asset cost and depreciated over the asset life.

We have completed an assessment of the specific applicability and implications of SFAS No. 143. We have identified, but have not recognized, asset retirement obligation, or ARO, liabilities related to our electric and natural gas transmission and distribution assets. Many of these assets are installed on easements over property not owned by the Company. The easements are generally perpetual and only require retirement action upon abandonment or cessation of use of the property for the specified purpose. The ARO liability is not estimable for such easements as we intend to utilize these properties indefinitely. In the event we decide to abandon or cease the use of a particular easement, an ARO liability would be recorded at that time.

Our regulated utility operations have, however, previously recognized removal costs of transmission and distribution assets as a component of depreciation in accordance with regulatory treatment. To the extent these amounts do not represent SFAS No. 143 legal retirement obligations, they are to be disclosed as regulatory liabilities upon adoption of the statement. As of December 31, 2002, we have estimated accrued removal costs related to our Montana transmission and distribution operations in the amount of \$109.6 million, all of which are included in accumulated depreciation.

SFAS No. 144, Accounting for the Impairment or Disposal of Long-Lived Assets, was issued in October 2001 and establishes a single accounting model for long-lived assets to be disposed of by sale. SFAS No. 144 requires that long-lived assets to be disposed of by sale be measured at the lower of the carrying amount or fair value less cost to sell, whether reported in continuing operations or discontinued operations. SFAS No. 144 also expands the reporting of discontinued operations to include components of an entity that have been or will be disposed of rather than limiting such discontinuance to a segment of a business. We adopted SFAS No. 144 effective

January 1, 2002. The adoption of SFAS No. 144 did not have a material impact on our results of operations, financial position, or cash flows as the long-lived asset impairment provisions of SFAS No. 144 effectively carried over the provisions of SFAS No. 121.

SFAS No. 145, Rescission of FASB Statements No. 4, 44, and 64, Amendment of FASB Statement No. 13, and Technical Corrections, was issued in April 2002. SFAS No. 145 eliminates the requirement that gains and losses from the extinguishments of debt be aggregated and classified as extraordinary items, net of the related income tax. It also requires sale-leaseback treatment for certain modifications of a capital lease that result in the lease being classified as an operating lease. We will adopt SFAS No. 145 on January 1, 2003.

SFAS No. 146, Accounting for Costs Associated with Exit or Disposal Activities, was issued in June 2002. SFAS No. 146 requires companies to recognize costs associated with exit or disposal activities when they are incurred rather than at the date of a commitment to an exit or disposal plan, including lease termination costs and certain employee termination benefits that are associated with a restructuring, discontinued operation, plant closing or other exit or disposal activity. SFAS No. 146 will be applied prospectively and is effective for exit or disposal activities that are initiated after December 31, 2002. We will adopt SFAS No. 146 on January 1, 2003.

FASB Interpretation No. 45, Guarantor's Accounting and Disclosure Requirements for Guarantees, Including Indirect Guarantees of Indebtedness of Others (FIN 45), was issued in November 2002. FIN 45 elaborates on the existing disclosure requirements for most guarantees. It also clarifies that at the time a company issues a guarantee, the company must recognize an initial liability for the fair market value of the obligations it assumes under that guarantee and must disclose that information in its interim and annual financial statements. The initial recognition and measurement provisions of the FIN 45 apply on a prospective basis to guarantees issued or modified after December 31, 2002. The disclosure requirements of FIN 45 have been included in Note 12, Guarantees, Commitments and Contingencies.

SFAS No. 148, Accounting for Stock-Based Compensation—Transition and Disclosure—an Amendment of FASB Statement No. 123, was issued in December 2002. It provides alternative methods of transition for a voluntary change to the fair value based method of accounting for stock-based employee compensation. SFAS No. 148 is effective for fiscal years beginning after December 15, 2003. The impact of the statement on our results of operations and financial position is currently under review by management.

FASB Interpretation No. 46, Consolidation of Variable Interest Entities (FIN 46), was issued in January 2003. This interpretation changes the method of determining whether certain entities, including securitization entities, should be included in a company's Consolidated Financial Statements. An entity is subject to FIN 46 and is called a variable interest entity, or VIE, if it has equity that is insufficient to permit the entity to finance its activities without additional subordinated financial support from other parties, or equity investors that cannot make significant decisions about the entity's operations, or that do not absorb the expected losses or receive the expected returns of the entity. All other entities are evaluated for consolidation in accordance with SFAS No. 94, Consolidation of All Majority-Owned Subsidiaries. A VIE is consolidated by its primary beneficiary, which is the party involved with the VIE that has a majority of the expected losses or a majority of the expected residual returns or both. The provisions of the interpretation are to be applied immediately to VIEs created after January 31, 2003, and to VIEs in which an enterprise obtains an interest after that date. For VIEs in which an enterprise holds a variable interest that it acquired before February 1, 2003, FIN 46 applies in the first fiscal period beginning after June 15, 2003. For any VIEs that must be consolidated under FIN 46 that were created before February 1, 2003, the assets, liabilities and non-controlling interest of the VIE would be initially measured at their carrying amounts with any difference between the net amount added to the balance sheet and any previously recognized interest being recognized as the cumulative effect of an accounting change. If determining the carrying amounts is not practicable, fair value at the date FIN 46 first applies may be used to measure the assets, liabilities and non-controlling interest of the VIE. FIN 46 also mandates new disclosures about VIEs, some of which are required to be presented in financial statements issued after January 31, 2003. We have evaluated the impact of FIN 46 to determine if we have any investments qualifying as VIEs and do not believe we have any VIEs. The rules are recent and, accordingly, they contain provisions that the accounting profession continues to analyze.

Reclassifications

Certain 2000 and 2001 amounts have been reclassified to conform to the 2002 presentation. Such reclassifications had no impact on net income or shareholders' equity as previously reported.

3. Acquisitions

The Montana Power, L.L.C.

On February 15, 2002, we completed the asset acquisition of Montana Power's energy transmission and distribution business for \$478.0 million in cash and the assumption of \$511.1 million in existing debt and mandatorily redeemable preferred securities of subsidiary trusts (net of cash received). Acquisition costs were approximately \$24.8 million. We completed this acquisition to expand our presence in the energy market. As a result of the acquisition, we are now a provider of natural gas and electricity to approximately 598,000 customers

in Montana, South Dakota, and Nebraska and have the capacity to provide service to wider regions of the country. For accounting convenience, due to the burden of a mid-month closing, both parties agreed to an effective date for the sale of January 31, 2002.

4. Long-Term Debt

Long-term debt at December 31 consisted of the following (in thousands):

	Due	2002	2001
Mortgage bonds—			
Montana—7.30%	2006	150,000	150,000
Montana—8.25%	2007	365	365
Montana—8.95%	2022	1,446	1,446
Montana—7.00%	2005	5,386	5,386
Pollution control obligations—		,	-,
Montana—6.125%	2023	90,205	90,205
Montana—5.90%	2023	80,000	80,000
Secured medium term notes—			23,033
7.23%	2003	15,000	15,000
7.25%	2008	13,000	13,000
Unsecured medium term notes—		,	,
7.07%	2006	15,000	15,000
7.875%	2026	20,000	20,000
7.96%	2026	5,000	5,000
Quips – 8.45%		65,000	65,000
ESOP Notes Payable – 9.2%			12,666
Discount on Notes and Bonds		(2,886)	(3,211)
		\$457,516	\$469,857

In December 2002, we entered into a commitment for a \$390 million senior secured term loan. We received net proceeds after payment of financing costs and fees of \$366.0 million under this term loan in February 2003. Our new senior secured term loan bears interest at a variable rate tied to the Eurodollar rate, with a minimum floor of 3.0%, plus a spread of 5.75% or at the greater of the prime rate and 4.00% plus a spread of 4.75%. Our new senior secured term loan expires on December 1, 2006, although we must make quarterly amortization payments equal to \$975,000 commencing on March 31, 2003. The credit agreement with respect to our senior secured term loan contains a number of representations and warranties and imposes a number of restrictive covenants that, among other things, limit our ability to incur indebtedness and make guarantees, create liens, make capital expenditures, pay dividends and make investments in other entities. In addition, we are required to maintain certain financial ratios, including:

- net worth (as defined) on the last day of each fiscal quarter of at least \$616.0 million plus 50% of cumulative net income (but not losses and excluding net income or losses of CornerStone, Blue Dot and Expanets) from each quarter commencing with the quarter ending March 31, 2003;
- a funded debt to total capital (as defined) ratio on the last day of each fiscal quarter of no greater than 72.5% (69.1% at December 31, 2002);
- a ratio of utility business earnings before interest, taxes, depreciation and amortization, or EBITDA(1), to consolidated recourse interest expense (which excludes non-cash interest expense) for the prior four fiscal quarters of at least 1.40 to 1.00 (2.25 at December 31, 2002);
- a ratio of Montana utility business EBITDA to interest expense on the Montana First Mortgage Bonds for the trailing four fiscal quarters of at least 3.00 to 1.00 (7.52 at December 31, 2002);
- a ratio of South Dakota utility business EBITDA to interest expense on the South Dakota First Mortgage Bonds for the trailing four fiscal quarters of at least 2.50 to 1.00 (6.11 at December 31, 2002);

⁽¹⁾ EBITDA is a non-GAAP financial measure and as such, we have not used it in describing our results of operations. We have used EBITDA in this section specifically to show compliance with our debt covenants and we do not refer to EBITDA for any other purpose herein

- a ratio of funded debt outstanding on the last day of each fiscal quarter to utility business EBITDA for the trailing four fiscal quarters of less than 8.75 to 1.00 prior to January 1, 2004, less than 8.25 to 1.00 during 2004 and less than 7.50 to 1.00 thereafter (7.68 at December 31, 2002);
- a ratio of the aggregate amount of Montana First Mortgage Bonds outstanding on the last day of each fiscal quarter to Montana utility business EBITDA for the trailing four fiscal quarters of less than 4.25 to 1.00 prior to January 1, 2005 and at least 3.75 to 1.00 thereafter (1.99 at December 31, 2002); and
- a ratio of the aggregate amount of South Dakota First Mortgage Bonds outstanding on the last day of each fiscal quarter to South Dakota utility business EBITDA for the trailing four fiscal quarters of less than 4.75 to 1.00 prior to January 1, 2005 and at least 4.25 to 1.00 thereafter (2.32 at December 31, 2002);

For purposes of determining compliance with these covenants, "net worth" is defined as the sum of shareholders' equity and preferred stock (including mandatorily redeemable preferred securities of subsidiary trusts), preference stock and preferred securities of NorthWestern and its subsidiaries on September 30, 2002, with said total specified as \$770 million, plus any gain in (or minus any loss in) the sum of shareholders' equity and preferred stock (including mandatorily redeemable preferred securities of subsidiary trusts), preference stock and preferred securities of NorthWestern and its subsidiaries (excluding Blue Dot, CornerStone and Expanets) after September 30, 2002. Total capital is defined as funded debt on any such date plus net worth (as defined) as of the end of the most recent fiscal quarter.

In January 2003, in connection with executing the new senior secured term loan facility, we applied to the MPSC for authorization to issue up to \$280 million aggregate principal amount of First Mortgage Bonds secured by Montana utility assets as security for our new senior secured term loan facility. In granting its approval, the MPSC placed the following conditions on the approval of the First Mortgage Bonds:

- We must apply all proceeds from the sale of non-utility assets, specifically including Blue Dot and Expanets, to debt reduction;
- We must commit to fully funding the operation, maintenance, repair and replacement of our public utility infrastructure in Montana and we were required to file a maintenance plan and budget with the MPSC by March 13, 2003;
- We may not provide more than an additional \$10 million in aggregate in capital to any non-utility entity without the prior approval of the MPSC;
- We must report all advances to non-utility companies to the MPSC within 5 business days of such advance; and
- if the existing credit agreements for Blue Dot or Expanets are terminated, we may file an application with the MPSC seeking approval to provide secured loans of up to \$20 million to Blue Dot and up to \$30 million to Expanets.

The Montana First Mortgage Bonds are four series of bonds that The Montana Power Company issued. The Montana Pollution Control Obligations are obligations that The Montana Power Company issued that mature in 2023. The Montana Secured Medium Term Notes are obligations that The Montana Power Company issued. All of these obligations are secured by substantially all of our Montana electric and natural gas assets. The series of Montana Secured Medium Term Notes that matured in January 2003 bore interest at 7.23% per annum and were repaid at their maturity on January 27-28, 2003.

The Montana Unsecured Medium Term Notes are general obligations issued by The Montana Power Company.

Annual scheduled retirements of long-term debt during the next five years are \$15.0 million in 2003, none in 2004, \$5.4 million in 2005, \$165.0 million in 2006 and \$0.4 million in 2007.

5. Comprehensive Income (Loss)

Comprehensive income (loss) is the sum of net income as reported and other comprehensive income (loss). Our other comprehensive income (loss) primarily resulted from gains and losses on derivative instruments qualifying as hedges, a minimum pension liability adjustment and unrealized gains and losses on available-for-sale investment securities.

The components of other comprehensive income (loss) for the years ended December 31, 2002 and 2001 were as follows (in thousands):

2002 2001

Other comprehensive income:

—Foreign currency translation adjustment	122	410
—Total other comprehensive income (loss)	\$122	\$410

The accumulated balance of other comprehensive income (loss) at December 31, 2002 and 2001 was \$2,208,000 and \$2,086,000, respectively.

6. Financial Instruments

The following disclosure of the estimated fair value of financial instruments is made in accordance with the requirements of SFAS No. 107, "Disclosures About Fair Value of Financial Instruments." The estimated fair-value amounts have been determined using available market information and appropriate valuation methodologies. However, considerable judgment is necessarily required in interpreting market data to develop estimates of fair value. Accordingly, the estimates presented herein are not necessarily indicative of the amounts that we would realize in a current market exchange.

The following methods and assumptions were used to estimate the fair value of each class of financial instruments for which it is practicable to estimate that value:

- The carrying amounts of cash and cash equivalents, restricted cash and investments approximate fair value due to the short maturity of the instruments. The fair value of life insurance contracts is based on cash surrender value.
- Fair values for debt were determined based on interest rates that are currently available to us for issuance of debt with similar terms and remaining maturities, except for publicly traded debt, which is based on market prices.
- The fair value of preferred securities of subsidiary trusts is based on current market prices.
- The fair-value estimates presented herein are based on pertinent information available to us as of December 31, 2002. Although we are not aware of any factors that would significantly affect the estimated fair-value amounts, such amounts have not been comprehensively revalued for purposes of these financial statements since that date, and current estimates of fair value may differ significantly from the amounts presented herein.

The estimated fair value of financial instruments at December 31 is summarized as follows (in thousands):

	2002		20	01	
	Carrying	Carrying			
	Amount	Fair Value	Amount	Fair Value	
Assets:					
Cash and cash equivalents	\$9,898	\$9,898	\$3,422	\$3,422	
Restricted Cash	18,070	18,070	,		
Investments Liabilities:	22,974	22,974	21,448	21,448	
Long-term debt (including due within one year)	457,516	426,553	469,857	458,861	

7. Income Taxes

Income tax expense (benefit) applicable to continuing operations before minority interests for the years ended December 31 is comprised of the following (in thousands):

Federal	2002	2001
Current	\$12,681 (25,275)	\$(16,063) 7,298
State	(695)	4,450
	\$(13,289)	\$(4,315)

The following table reconciles our effective income tax rate to the federal statutory rate:

	2002	2001
Federal statutory rate	35.0%	35.0%
State income, net of federal provisions	(4.0)	(9.7)
Amortization of investment tax credit	1.1	0.9
Reversal of utility book/tax depreciation	6.6	(9.5)
Other, net	(4.7)	(7.6)
	34.0%	9.1%

The components of the deferred income tax asset (liability) recognized in our Consolidated Balance Sheets are related to the following temporary differences at December 31 (in thousands):

	2002	2001
Amortization of gain on sale/leaseback	\$3,379	\$3,801
Unamortized investment tax credit	7,979	8,265
Other	115,582	163,866
	\$126,940	\$175,932
Plant related	\$(249,781)	\$(198,104)
Other, net	(12,754)	(37,070)
	\$(262,535)	\$(235,174)
	\$(135,595)	\$(59,242)

8. Operating Leases and Sale-Leaseback Transactions

The Company, Expanets and Blue Dot lease vehicles, office equipment and office and warehouse facilities under various long-term operating leases. In connection with the purchase of Montana Power, we have eight years remaining under an operating lease agreement to lease generation facilities. At December 31, 2002, future minimum lease payments under noncancelable lease agreements are as follows (in thousands):

2003	\$31 571
	Φ 34 ,374
2004	34 820
0.004	31,020
2005	33,499
2006	22 251
2000	33,331
2007	32.024
	34,934
Thereafter	97.052

Lease and rental expense incurred were \$3.4 million, \$9.7 million and \$6.8 million in 2002, 2001 and 2000, respectively.

9. Team Member Benefit Plans

We sponsor and/or contribute to pension and postretirement health care and life insurance benefit plans for team members of the corporate and regulated utility division. In addition, we also sponsor nonqualified, unfunded defined benefit pension plans for certain officers and other employees. With the acquisition of Montana Power, we assumed their pension and postretirement health care plans. These plans are reflected in the 2002 columns of the tables below.

Net periodic cost for our pension and other post-retirement plans consists of the following (in thousands):

			Other Postretirement	
_	Pension Benefits		Benefits	
_	2002	2001	2002	2001
Components of Net Periodic Benefit Cost (Income)				
Service cost	\$4,144	\$4,731	\$550	\$526
Interest cost	17,345	18.028	3.555	3.398
Expected return on plan assets	(16,475)	(20,547)	(399)	(706)

Amortization of transitional obligation	1,960	(20) 2,094	789 28	862 156
Recognized actuarial (gain) loss			633	67
Additional (income) or loss recognized:	\$6,933	\$4,286	\$5,156	\$4,303
Curtailment Special termination benefits	\$910 4,191	\$(2,315)	804 168	(514)
Settlement cost	3,744	(770)		
Net Periodic Benefit Cost (Income)	\$15,778	\$1,201	\$978	\$3,789

The prior service costs are amortized on a straight-line basis over the average remaining service period of active participants. Gains and losses in excess of 10% of the greater of the benefit obligation or the market-related value of assets are amortized over the average remaining service period of active participants.

Following is a reconciliation of the changes in plan benefit obligations and fair value and a statement of the funded status as of December 31 (in thousands):

		Othe	-
		Postretire	ment
Pension Benefits		Benefi	ts
2002	2001	2002	2001

The total projected benefit obligation and fair value of plan assets for the pension plan with a projected benefit obligation in excess of plan assets was \$275.9 million and \$163.5 million, respectively as of December 31, 2002.

The accrued pension and other post-retirement benefit obligations recognized in the accompanying Consolidated Balance Sheets are computed as follows (in thousands):

			Othe	r
			Postretire	ment
-	Pension B	enefits	Benefits	
_	2002	2001	2002	2001
Funded Status	S(112,431) (82)	\$(44,828)	\$(53,422) 7,932	\$(40,665) 9,443
Unrecognized net actuarial loss (gain)	77,976	23,329	17,822	3,104

Unrecognized prior service cost	18,499	21,367	237	1,386
(Accrued) Prepaid benefit cost	\$(16,038)	\$(258)	\$(27,431)	\$(26,732)
Prepaid benefit cost	\$	\$	\$	\$
Accrued benefit cost	(16,038)	(258)	(27,431)	(26,732)
Additional minimum liability	88,813	36,357		
Intangible asset	(18,499)	(21,367)		
Regulatory asset	-		-	
Accumulated other comprehensive income.	(70,314)	(14,990)		
Net amount recognized.		\$(258)	\$(27,431)	\$(26,732)

The weighted-average assumptions used in calculating the preceding information are as follows:

			Othe	71
			Postretir	ement
	Pension B	enefits	Benet	its
	2002	2001	2002	2001
Discount rate	7.0%	7.0%	6.0-6.5%	7.0%
Expected rate of return on assets	8.50%	9.0%	8.50%	9.0%
Long-term rate of increase in compensation levels	3.97%	4.40%		

Other

The rate of increase in per capita costs of covered health care benefits is assumed to be 12 percent in 2003, decreasing gradually to 5 percent by the year 2009. The following table sets forth the sensitivity of retiree welfare results (in thousands):

Effect of a one percentage point increase in assumed health care cost trend	
on total service and interest cost components	\$154
on postretirement benefit obligation.	1.351
Effect of a one percentage point decrease in assumed health care cost trend	1,551
on total service and interest cost components	\$(133)
on postretirement benefit obligation.	(1,194)

Pension costs in Montana are included in rates on a pay as you go basis for regulatory purposes. Other postretirement benefit costs in Montana are included in rates on an accrual basis for regulatory purposes. (See Note 10, "Regulatory Assets and Liabilities", for the regulatory assets related to our pension and other post-retirement benefit plans.)

During 2002 and 2000, we made available to select team members an early retirement program. The impact of that reduction in participants resulted in the Settlement Costs and Special Termination Benefits presented in the above table.

10. Regulatory Assets and Liabilities

Our regulated business prepares their financial statements in accordance with the provisions of SFAS No. 71, as discussed in Note 2 to the Financial Statements. Pursuant to this pronouncement, certain expenses and credits, normally reflected in income as incurred, are recognized when included in rates and recovered from or refunded to the customers. Accordingly, we have recorded the following major classifications of regulatory assets and liabilities that will be recognized in expenses and revenues in future periods when the matching revenues are collected or refunded.

	2002	2001
Pension	\$42,696	\$
Colstrip Unit 3 carrying charge		38.337
SFAS No. 106 purchase obligation	4,174	
Conservation programs		27.956
Income taxes	62,908	61.375
Other	11,950	81,710
Total regulatory assets	\$121,728	\$209.378
Utility sale stipulation agreement	\$16,254 15,456	S—

Proceeds from oil & gas sale		33,426
Proceeds from electric generation asset sale		257,519
Other	6,794	38,469
Total regulatory liabilities	\$54,486	\$329,414

Pension costs in Montana are recovered in rates on a cash basis. Competitive transition charges relate to natural gas properties and earn a rate of return sufficient to meet the debt service requirements of the Montana natural gas transition bonds. No other significant regulatory assets earn a return. A regulatory asset has been recognized for the SFAS No. 106 purchase obligation upon the purchase of Montana Power. The MPSC allows recovery of SFAS No. 106 costs on an annual basis. Tax assets and liabilities primarily reflect the effects of plant related temporary differences such as removal costs, capitalized interest and contributions in aid of construction that we will recover or refund in future rates. During 2000 and 2001 Montana Power made sales of natural gas from its storage field at prices in excess of its original cost, creating a regulatory liability. This gain is being flowed to customers over a period that matches the depreciable life of surface facilities that were added to maintain deliverability from the field after the withdrawal of the gas. Montana Power also has a regulatory liability related to oil and gas proceeds, that is being credited to customer bills on a monthly basis. In connection with the acquisition of Montana Power, a stipulation agreement was signed that required a contribution by the previous owner and the Company, which will fund credits to Montana electric distribution customers. The account is being applied on a kilowatt hour basis beginning July 1, 2002 for one year.

11. Deregulation and Regulatory Matters

Deregulation

The electric and natural gas utility businesses in Montana are operating in a competitive market in which commodity energy products and related services are sold directly to wholesale and retail customers.

Electric

Montana's Electric Utility Industry Restructuring and Customer Choice Act (Electric Act), passed in 1997, provides that all customers will be able to choose their electric supplier by June 30, 2007, with our electric utility acting as default supplier. As default supplier, we are obligated to continue to supply electric energy to customers in our service territory who have not chosen, or have not had an opportunity to choose, other power suppliers.

In its 2001 session, the Montana Legislature passed House Bill 474, which, among other things, reaffirmed full cost recovery for the default supplier by mandating that the MPSC use an electric cost recovery mechanism providing for full recovery of prudently incurred electric energy supply costs. In November 2002, Initiative 117 was passed, repealing HB 474 and allowing a transition period through June 30, 2007. Because of the language that remains from the previous law, we believe we have adequate assurances of recovering our costs of acquiring electric supply.

On October 29, 2001, Montana Power, the former owner of the utility, filed with the PSC the default supply portfolio. That portfolio contained a mix of long and short-term contracts that were negotiated in order to provide electricity to default supply customers. This filing sought approval of the default supply portfolio contracts and establishment of default supply rates for customers who have not chosen alternative suppliers by July 1, 2002.

On that same day, Montana Power submitted an updated Tier II filing with the PSC, addressing the recovery of transition costs of generation assets and other power-purchase contracts, generation-related regulatory asset transition costs, and transition costs associated with the out-of-market QF power-purchase contract costs. The Tier II filing related to the deregulation of electric supply in Montana. On December 28, 2001, together with NorthWestern, the Montana Consumer Counsel, Commercial Energy and the Large Customer Group, Montana Power submitted to the PSC an agreed upon stipulation settling the transition cost recovery in the Tier II filing and approving the sale to NorthWestern. The stipulation called for Montana Power, through Touch America, and NorthWestern to establish a \$30 million account that will be used to provide a credit for our electric distribution customers. As of December 31, 2002 this is a regulatory liability of \$16.3 million, see Note 10. "Regulatory Assets and Liabilities". The credit is being provided over a one year period to customers on a per kilowatt-hour (Kwh) basis beginning on July 1, 2002, when our current below market energy supply contract expired. The stipulation also states that customers will have no obligation to pay any transition costs accrued under or relating to the accounting orders issued by the PSC.

Natural Gas

Montana's Natural Gas Utility Restructuring and Customer Choice Act, also passed in 1997, provides that a natural gas utility may voluntarily offer its customers choice of natural gas suppliers and provide open access. We have opened access on our gas

transmission and distribution systems, and all of our natural gas customers have the opportunity of gas supply choice. We are also the default supplier for the remaining natural gas customers.

Regulatory Matters

The Montana, South Dakota and Nebraska PSCs regulates our transmission and distribution services and approves the rates that we charge for these services, while FERC regulates our transmission services and our remaining generation operations. There have been no regulatory issues in South Dakota or Nebraska during the past 3 years. Current regulatory issues are discussed below.

Montana

Electric Rates

On June 20, the Montana PSC directed the company to file new rates effective July 1, 2002 that recover estimated electric supply costs for the period July 1, 2002 through June 30, 2003. The rates are approved on an interim basis pending a prudence review that will be conducted after July 1, 2003. This includes implementation of rates to begin recovery of the out-of-market transition costs from the Tier II proceeding / order.

Natural Gas Rates

On October 10, 2002 the Commission issued an order authorizing the revenue changes outlined in a stipulation submitted by Northwestern Energy and the Montana Consumer Counsel that resolved two outstanding dockets. The stipulation finalized the calculation of the amounts that the company would be allowed to include for recovery in its natural gas tracker for purchases under a contract originally entered into with a related party. The issues resolved included the annual quantity of gas subject to purchase under the contract and the periods covered by the contract. We filed our 2002/2003 natural gas tracking filing with the Commission on November 13, 2002. Interim rates were effective December 15, 2002, with a final order still pending.

FERC

Through a filing with FERC in April 2000, we are seeking recovery of transition costs associated with serving two wholesale electric cooperatives. On July 15, 2002, a FERC administrative judge issued a summary judgment dismissing the company's claim primarily on the grounds that the filing did not use FERC methodology. On December 2, 2002 we filed a "Brief on Exceptions to the Initial Decision" aimed at reversing the initial decision. A decision by FERC is still pending.

12. Guarantees, Commitments and Contingencies

Qualifying Facilities Liability

With the acquisition of our Montana Operations, we assumed a liability for expenses associated with certain Qualifying Facilities Contracts, or QFs. The QFs require us to purchase minimum amounts of energy at prices ranging from \$65 to \$138 per megawatt hour through 2029. Our gross contractual obligation related to the QFs is approximately \$1.9 billion through 2029. A portion of the costs incurred to purchase this energy is recoverable through rates and payments from the MPSC, totaling approximately \$1.5 billion through 2029. Upon completion of the purchase price allocation related to our acquisition of the electric and natural gas transmission and distribution business of The Montana Power Company, we established a liability of \$134.3 million, based on the net present value (using an 8.75% discount factor) of the difference between our obligations under the QFs and the related amount recoverable. At December 31, 2002 the liability was \$143.1 million.

The following summarizes the contractual estimated payments, net of recoveries allowed in rates (in thousands):

2003	\$11 100
2004	0.500
2007	9,300
2005	10,200
2006	3,900
2007	5,800
Thereafter	398,800
Total	\$439.300

Long Term Power Purchase Obligations

We have entered into various commitments, largely purchased power, coal and natural gas supply, electric generation construction and natural gas transportation contracts. These commitments range from one to thirty years. The commitments under these contracts as of December 31, 2002 were \$195.0 million in 2003, \$181.3 million in 2004, \$163.3 million in 2005, \$124.5 million in 2006, \$58.5 million in 2007 and \$77.4 million thereafter. These commitments are not reflected in our Consolidated Financial Statements.

Letters of Credit

We have various letter of credit requirements and other collateral obligations related to our Montana operations of approximately \$4.0 million at December 31, 2002.

Environmental Liabilities

We are subject to numerous state and federal environmental regulations. The Clean Air Act Amendments of 1990 (the Act) stipulate limitations on sulfur dioxide and nitrogen oxide emissions from coal-fired power plants. We believe we can comply with such sulfur dioxide emission requirements at our generating plants and that we are in compliance with all presently applicable environmental protection requirements and regulations. We are also subject to other environmental statutes and regulations including matters related to former manufactured gas plant sites. We have an environmental reserve of \$5.2 million at December 31, 2002, related to our Montana operations. When losses from costs of environmental remediation obligations from our utility operations are probable and reasonably estimable, we charge these costs against the established reserve.

Legal Proceedings

Prior to 1999, Montana Power Company was the principal, vertically integrated electric utility in the state of Montana, owning and operating generation, transmission and distribution facilities as well as operating a telecommunication business and other non-regulated assets such as oil and gas, coal, and independent power businesses. In 1999, Montana Power sold its power generating assets to PP&L Montana, LLC. Thereafter, Montana Power's subsidiary Entech, Inc. undertook a series of sales of Montana Power's non-regulated energy businesses (i.e., its coal, oil and natural gas businesses), and its out-of-state independent power-production business, to several third parties (collectively, the "Entech Sales"). The sale of the power generating assets and the Entech Sales took place over a period of time from December 1999 to April 2001.

On August 16, 2001, eight individuals filed a lawsuit in Montana State District Court, entitled McGreevey, et al. v. Montana Power Company, et al., DV-01-141, 2nd Judicial District, Butte-Silver Bow County, MT, naming The Montana Power Company, all of its outside directors and certain officers, PPL Montana, and Goldman Sachs as defendants (the "Litigation"), alleging that Montana Power and its directors and officers and investment bankers had a legal obligation and/or a fiduciary duty to obtain shareholder approval before consummating the sale of the electric generation assets to PPL Montana. The plaintiffs further allege that because the Montana Power shareholders did not vote to approve the sale, the sale of the generation assets is void and PPL Montana is holding these assets in constructive trust for the shareholders. Alternatively, the plaintiffs allege that Montana Power shareholders should have been allowed to vote on the sale of the generation assets and, if an appropriate majority vote was obtained in favor of the sale, the objecting shareholders should have been given dissenters' rights. The plaintiffs have amended the complaint to add Milbank Tweed (legal advisors to Montana Power and Touch America), The Montana Power, L.L.C., Touch America Holdings, Inc. and the purchasers of the energy-related assets and have claimed that Montana Power and the other defendants engaged in a series of integrated transactions to sell all or substantially all of its assets and deprive the shareholders of a vote.

After denying the original defendants' motions to dismiss the complaint, upon plaintiffs' motion, the court certified a class consisting of shareholders of record as of December 1999. The court has also, upon plaintiffs' motion, added Clark Fork and Blackfoot LLC as a successor to The Montana Power Company and NorthWestern as an additional defendant as a result of the transfer of substantially all of the assets and liabilities from NorthWestern Energy LLC to NorthWestern. Recently, the case has been removed to federal court in Montana upon a petition by Milbank Tweed. Plaintiffs filed a motion to remand the action to state court. The parties are briefing the remand motion and the federal court after a hearing will decide whether or not the case remains in federal court. It is the position of all defendants that The Montana Power Company and its former directors and officers have fully complied with their statutory and fiduciary duties and no shareholder vote was required. Accordingly, all defendants are defending the suit vigorously. We also believe that we have both substantive and procedural defenses to this action and accordingly, we will vigorously defend against any assertion to the effect that NorthWestern Energy LLC or NorthWestern has any liability in this matter.

In September 2000, Montana Power established Touch America Holdings, Inc. as a new holding company with four subsidiaries, The Montana Power, L.L.C., Touch America, Inc., Tetragenics Company and Entech LLC (referred to as the "Restructuring"). Entech Inc. was merged into Entech LLC and the ownership of Entech LLC was distributed by The Montana Power, L.L.C. to Touch America Holdings, Inc. Montana Power was merged into The Montana Power, L.L.C. and an exchange of Montana Power common stock for Touch America Holdings, Inc. common stock on a one-for-one basis occurred. Certain assets and liabilities of Montana Power subsequently were transferred to Touch America Holdings, Inc. Pursuant to a Unit Purchase Agreement signed on or about September 29, 2000,

NorthWestern acquired the former electric and gas transmission and distribution business of Montana Power by purchasing the sole unit membership interest in The Montana Power, L.L.C. Subsequently, the Company renamed The Montana Power, L.L.C. as Northwestern Energy LLC. In November 2002, NorthWestern and NorthWestern Energy LLC entered into an Asset and Stock Transfer Agreement whereby NorthWestern acquired substantially all of NorthWestern Energy LLC's assets. Finally, NorthWestern Energy LLC was renamed again on November 20, 2002 to become Clark Fork and Blackfoot, L.L.C.

Clark Fork and Blackfoot, L.L.C. and NorthWestern believe that no shareholder vote was required for any of the transactions in question and that the shareholders had an opportunity to vote on the Touch America restructuring and NorthWestern's acquisition, which was fully approved by a supermajority of The Montana Power Company's shareholders in September 2001. In the event that Clark Fork and Blackfoot, L.L.C. or NorthWestern faces liability, we believe that we have an indemnification claim against Touch America for adverse consequences resulting from that liability. In light of the financial difficulties experienced by the telecommunications industry, we are uncertain as to the ability of Touch America to satisfy its contractual indemnification claim arising from this litigation. At this early stage, however, we cannot predict the ultimate outcome of this matter or how it may affect our combined financial position, results of operations or cash flows.

In 1999, Montana Power entered into an Asset Purchase Agreement with PPL Montana pursuant to which Montana Power agreed to sell, among other assets, its portion of the 500-kilovolt transmission system associated with Colstrip Units 1, 2, and 3 for \$97.1 million, subject to the receipt of required regulatory approvals. As part of the Touch America reorganization described above, The Montana Power, L.L.C. acquired Montana Power's rights under the Asset Purchase Agreement. In September 2002, Clark Fork and Blackfoot, L.L.C. brought suit in Montana State District Court to compel PPL Montana to perform its obligations under the Asset Purchase Agreement and to recover damages. The case has been removed to the Federal District Court in Butte, Montana. We have filed a motion for partial summary judgment on the issue of specific performance of PPL Montana's obligation to complete the purchase. That motion has been fully briefed and is awaiting decision. NorthWestern believes its claims are meritorious and we intend to vigorously prosecute this litigation. At this early stage of the litigation, however, we cannot predict the ultimate outcome of this matter or how it may affect our financial position, results of operations, or cash flows.

On or about March 7, 2003, plaintiff Dana Ross, individually and on behalf of a class of all others similarly situated, filed a complaint alleging breach of fiduciary duty and violations of federal securities fraud laws (including Sections 10(b) and 20(a) of the Securities Exchange Act of 1934 and Rule 10b-5 thereunder) against Merle D. Lewis (the former Chairman and Chief Executive Officer of the Company), Kipp D. Orme (the Company's Vice President-Finance and Chief Financial Officer), and the Company. The lawsuit is entitled Dana Ross, et al. v. Merle D. Lewis, et al.; Case No. CIV03-4049, In the United States District Court of South Dakota, Southern Division. The putative class consists of all public investors who purchased common stock of NorthWestern from August 2, 2000 to December 13, 2002. Plaintiffs allege that defendants misrepresented NorthWestern's business operations and financial performance, overstated NorthWestern's revenue and earnings, among other things, by maintaining insufficient reserves for accounts receivables at Expanets, failed to disclose billing problems and lapses and data conversion problems, and failed to make full disclosures of problems (including the billing and data conversion issues) arising from the implementation of Expanets' EXPERT system. Plaintiffs' complaint alleges that NorthWestern's public statements, omissions, and failures to maintain adequate accounts receivables reserves artificially inflated NorthWestern's earnings and stock price, and that the class has been damaged as a result. The action seeks unspecified compensatory damages, rescission, and attorneys fees and costs as well as accountants and experts fees. The lawsuit has not yet been served. Given that it was only recently filed, we are not able to assess the likely outcome or risk of an adverse decision in this matter.

We and our partner entities are parties to various other pending proceedings and lawsuits, but in the judgment of our management, the nature of such proceedings and suits and the amounts involved do not depart from the routine litigation and proceedings incident to the kinds of business we conduct, and management believes that such proceedings will not result in any material adverse impact on us.

13. Company Obligated Mandatorily Redeemable Preferred Securities of Subsidiary Trusts

Series	Par Value	Shares	2002	2001
			(in thou	isands)
8.45% Montana Power	\$25	2,600,000	65,000	65,000
		2,600,000	\$65.000	\$65,000

Montana Power had established Montana Power Capital I (Trust) as a wholly owned business trust to issue common and preferred securities and hold Junior Subordinated Deferrable Interest Debentures (Subordinated Debentures) that we issue. Outstanding at December 31, 2002 were \$2.6 million units of 8.45 percent Cumulative Quarterly Income Preferred Securities, Series A (QUTPS), which are due in 2036. Holders of the QUIPS are entitled to receive quarterly distributions at an annual rate of 8.45 percent of the liquidation preference value of \$25 per security. The Trust will use interest payments received on the Subordinated Debentures that it holds to make the quarterly cash distributions on the QUIPS.

We can wholly redeem the Subordinated Debentures at any time, or partially redeem the Subordinated Debentures from time to time. We also can wholly redeem the Subordinated Debentures if certain events occur before that time. Upon repayment of the Subordinated Debentures at maturity or early redemption, the Trust Securities must be redeemed. In addition, we can terminate the Trust at any time and cause the pro rata distribution of the Subordinated Debentures to the holders of the Trust Securities.

Besides our obligations under the Subordinated Debentures, we have agreed to certain Back-up Undertakings. We have guaranteed, on a subordinated basis, payment of distributions on the Trust Securities, to the extent the Trust has funds available to pay such distributions. We also have agreed to pay all of the expenses of the Trust. Considered together with the Subordinated Debentures, the Back-up Undertakings constitute a full and unconditional guarantee of the Trust's obligations under the QUIPS. We are the owner of all the common securities of the Trust, which constitute 3 percent of the aggregate liquidation amount of all the Trust Securities.
